

A SNEAK PEEK AT

---

**WASM**

By Leo Melin / Gofore Oy

# HISTORY

- ▶ Mozilla did ASM.js (subset of JS)
- ▶ Google did PNaCl (Portable Native Client)
- ▶ → Apple, Mozilla, Microsoft & Google started WebAssembly

# WHAT IS IT?

- ▶ Assembly-like language for Web
- ▶ Specification of bytecode for web -> faster to parse, faster to execute than JS
- ▶ ASM.js made right
  - ▶ Collaboration with major browser manufacturers
  - ▶ Faster decoding
  - ▶ Better performance

# FEATURES

- ▶ Full threading support
- ▶ Integrated CG
- ▶ DOM integration
- ▶ Multi-process support
- ▶ Source maps
- ▶ + lots of compiler level stuff (SIMD types & intrinsics, coroutines, dynamic linking, tail-call optimization)

**IT'S NOT THE END  
OF JS**

# WHAT'S IN THE FUTURE?

- ▶ HTML/CSS/JS/WASM combinations
- ▶ Full HTML/CSS/WASM app
- ▶ WASM based frameworks/libraries
- ▶ Some extreme experimental sh\*t

# USE CASES

- ▶ Image / video editing
- ▶ Games, game portals, heavy 3d
- ▶ Peer-to-peer applications (games, collaborative editing, decentralized and centralized)
- ▶ Music applications (streaming, caching)
- ▶ Video/audio codecs in Wasm
- ▶ Image recognition
- ▶ Live video manipulation
- ▶ VR and augmented reality (very low latency)
- ▶ CAD applications
- ▶ Visualisation / simulation / emulation / virtual machine
- ▶ POSIX user-space environment, allowing porting of existing POSIX applications
- ▶ Developer tooling (editors, compilers, debuggers, ...)
- ▶ Remote desktop
- ▶ Encryption/Decryption

# USING WASM TODAY

- ▶ ASM.js FTW
- ▶ You CAN use clang to produce wasm
- ▶ Format is still changing
- ▶ Not supported very well
- ▶ Binaryen toolkit for WASM

# WORKFLOW

- ▶ 1. Write source in C/C++
- ▶ 2. Compile source to .s -format
- ▶ 3. .s format → Wasm text format (s-expression)
- ▶ 4. Wasm text format → Wasm binary format
- ▶ 5. `const Foo = Wasm.instantiateModule(binary).exports.Foo`
  - ▶ ...or propably at some point:  
`import Foo from 'foo.wasm'`

**DEMO**

## TRY IT OUT!

- ▶ Install Binaryen
- ▶ Install emscripten
- ▶ Install clang
- ▶ Do some hacking & experiment!

# HAPPY HACKING!
